

Listing of the Claims

This listing of claims will replace all prior versions and listing of claims in the application:

1. (original) Image display apparatus comprising projector means, a first light source, at least one primary modulator for modulating light from the first light source, a second light source, optical means for combining light from the second light source with the modulated light from the at least one primary modulator, and an auxiliary modulator for modulating the combined light from the second light source and the modulated light from the at least one primary modulator.
2. (original) Image display apparatus according to claim 1 in which the at least one primary modulator comprises a first primary modulator for modulating red light, a secondary primary modulator for modulating green light, and a third primary modulator for modulating blue light.
3. (previously amended) Image display apparatus according to claim 1 in which the primary and auxiliary modulators are transmissive light modulators.

4. (previously amended) Image display apparatus according to claim 1 in which the primary and auxillary modulators are reflective light modulators.

5. (previously amended) Image display apparatus according to claim 1 in which the first light source has a first spectral content and the second light source has a different spectral content.

6. (original) Image display apparatus according to claim 5 in which the first light source has a spectral content in the visible part of the spectrum and the second light source has a spectral content in the infrared part of the spectrum.

7. (currently amended) Image display apparatus according to claim 1 in which the at least one primary modulator is driven by an output channel from the an image generator, and the auxillary modulator is driven by a separate output channel from the image generator.

8. (currently amended) Image display apparatus according to claim 1 in which the at least one primary modulator is driven by a combination of output channels from ~~the~~ an image generator, and the auxillary modulator is also driven by a combination of output channels from the image generator.
